

BRANDON EGENES

egenesbj@gmail.com

Accomplished Senior Software Engineer specializing in architecting secure, cloud-native enterprise SaaS and HIPAA-compliant healthcare solutions. Expert in building scalable, distributed microservices using C# and .NET 8. Experienced in driving innovation by integrating production-grade AI and LLM workflows via Azure OpenAI and Snowflake Cortex.

Skills

- **Angular**
- **React**
- **TypeScript**
- Blazor
- CSS
- **SQL Server**
- **PostgreSQL**
- Entity Framework
- Redis
- Snowflake
- Snowpark
- **C#/.NET Core 8**
- **ASP.NET Core**
- Azure
- **AWS**
- Docker
- CI/CD
- GitHub
- **Azure OpenAI**
- REST APIs
- OAuth 2.0
- HIPAA

WORK HISTORY

Senior Software Engineer

Cognizant · Full-time

January 2025-March 2025

- Architected core backend services for CortexMed using C# / .NET 8 and ASP.NET Core, implementing HL7 FHIR R4 data ingestion pipelines that normalized patient records from multiple EHR systems into Snowflake Health Data Cloud
- Designed and integrated Snowflake Cortex AI and Azure OpenAI into a .NET 8 API abstraction layer, enabling LLM-driven automation of ICD-10/CPT coding and clinical visit summarization that measurably reduced physician documentation overhead.
- Built clinical dashboards using Blazor WebAssembly and React/TypeScript, surfacing real-time patient risk scores and population health metrics via Snowflake Cortex Analyst APIs
- Developed ML model serving pipelines with Snowpark and .NET worker services, integrating readmission and sepsis prediction models into the platform while maintaining HIPAA compliance across all AI inference workflows

Senior Software Engineer

Flatiron Health

August 2025-Present

- Architected HIPAA-compliant microservice APIs in C# / .NET Core 8 for UnitedHealth Group's member eligibility and benefits enrollment platform, enforcing end-to-end encryption, audit logging, and RBAC across distributed service boundaries.

- Implemented MediatR (CQRS) and Entity Framework Core with custom ASP.NET Core pipeline behaviors to standardize validation, request handling, and auditable PHI data access across PostgreSQL.
- Designed event-driven service communication using Azure Service Bus and Polly retry policies, decoupling complex enrollment and eligibility workflows and improving fault tolerance across distributed .NET services.
- Deployed containerized .NET microservices on Azure using Docker and Azure DevOps CI/CD pipelines, maintaining consistent release quality and deployment velocity across healthcare-regulated environments.
- Developed Blazor Server admin tooling with SignalR for real-time member eligibility and enrollment visibility, reducing manual processing overhead for operational teams managing high-volume payer data.

Software Engineer

Sabal Tech Inc.

January 2024-October 2024

- Developed backend services using C# / .NET Core for the Wyoming WINGS Medicaid modernization project , enabling real-time claims processing for statewide healthcare providers.
- Engineered HIPAA-aligned RESTful APIs and data models using C#, ASP.NET Core, and Entity Framework, ensuring secure and scalable data handling across multiple client-facing healthcare projects.
- Designed and implemented ASP.NET API integrations with Azure cloud hosting and React front-end components for the Medicaid Benefit Management System (BMS), streamlining claims submission workflows and reducing provider administrative overhead.

Full stack Developer

GM Financial

- Integrated major third-party payment gateways utilizing .NET Core 3 and Angular, resulting in a streamlined and error-free checkout experience.
- Developed full-stack features to handle subscription billing, automated renewals, and order workflows, improving overall transactional reliability.
- Built tokenized and encrypted API endpoints in compliance with PCI-DSS standards, guaranteeing the safety of customer data during processing.

Backend Developer

FedEx

August 2023-December 2023

- Developed and maintained server-side web application logic using C# and .NET Framework for a web-based healthcare platform.
- Designed and optimized relational database schemas using SQL Server and Entity Framework, ensuring secure and efficient storage of sensitive clinical records.

Built RESTful APIs via ASP.NET Web API to enable real-time patient data synchronization across the platform.

EDUCATION

Bachelor of Science in Computational Science

University of Washington
